

Hosting your Mitel Platform

UK Data Centres

Ultra Fast Storage

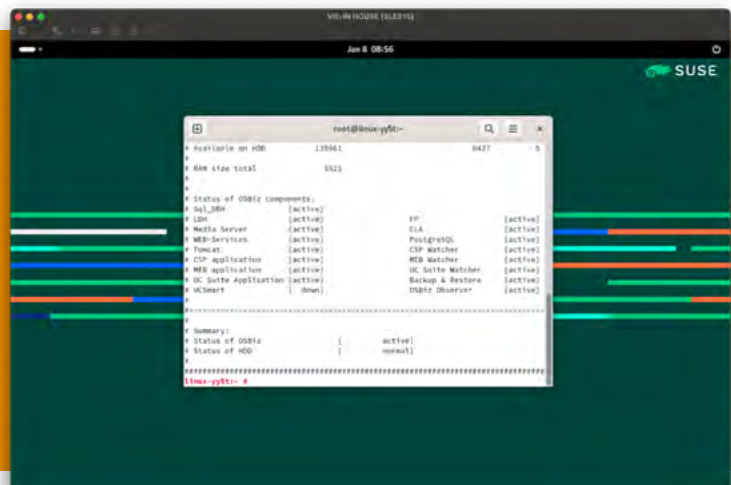

VMware Resilience

Secure, Reliable Hosting Since 2011

A facility built purely for hosting Mitel voice platforms and associated applications.

No compromise. No fuss.

Hosting your Mitel Platform

Security First

Hosted in UK data centres and protected by clustered Fortigate firewalls your clients system is as secure as it can be. Unlike shared UCaaS solutions the server instance is a dedicated resource.

Properly Resourced

The environment is built purely to host Mitel platforms and the associated applications such as call logging and recording or contact centre. We DON'T over allocate RAM or CPU resources ensuring the server instance has the resources it needs at all times.

VMware Resilience

Our server stack is managed by VMware Vsphere. We use the tools such as automatic VMotion to make sure the service to you is as resilient as it can be.

Fibre Backbone

Our fibre channel backbone delivers 100Gbps connectivity to the SAN and resilient 25Gbps networking to our hosts. It's blistering fast, resilient and ultra reliable.

Clever SAN

Our SAN is clever. The telephone systems are stored on ultra fast NVMe storage, we take regular snapshots and have an eye watering storage capacity for call recordings, logging or application data all stored and managed on SSD technology.
